SUMMARY

Platform Engineer with 5 years of experience building and operating production AWS platforms across Kubernetes/EKS, Terraform, GitOps, CI/CD, security, and observability. Experienced in platform modernization, Kubernetes reliability, infrastructure automation, cost optimization, and production operations. Builds AI-assisted infrastructure workflows with Claude Code and MCP for Terraform review, security analysis, and incident response.

EXPERIENCE

Platform Engineer | Chowly

Chicago, IL · Nov 2023 – Present

Two-person platform team supporting ~12 engineers across development, staging, and production on AWS.

- Replaced SSH-based deployments for 8 services with Packer AMIs, Terraform launch templates, and ASG refreshes, cutting deployment time from ~30 minutes to 8–10 minutes.
- Migrated 20 services to Argo CD on EKS, establishing GitOps delivery across 3 environments and eliminating manual production changes.
- Hardened EKS security with IRSA, least-privilege IAM/RBAC, Network Policies, and AWS Secrets Manager, improving workload identity and reducing reliance on long-lived cloud credentials.
- Established PR controls across 35 repositories with GitHub Actions, Trivy, Helm validation, and Terraform checks, reducing failed deployments from ~10% to <3%.
- Configured Karpenter and HPA across 3 EKS clusters, scaling beyond 100 nodes while improving node provisioning efficiency and workload capacity management.
- Built read-only Claude Code agents with MCP to review Terraform plans and IAM changes, surfacing infrastructure and security risks before human approval.

DevOps Engineer | Grubhub, Inc.

Chicago, IL · Jul 2021 – Nov 2023

- Built reusable Terraform modules for VPC, IAM, RDS, and remote state, standardizing infrastructure across 10+ services and reducing environment setup from days to hours.
- Automated CI/CD for 10+ services using GitHub Actions, Jenkins, Docker, and ECR, replacing manual release steps with repeatable deployments.
- Built and maintained Prometheus, Grafana, Alertmanager, and Thanos for application and infrastructure monitoring across production workloads.
- Diagnosed production incidents across Kubernetes, EC2, and RDS, including a CPU-throttling regression resolved through rollback and Kubernetes resource tuning.

SKILLS

Cloud: AWS, EKS, EC2, VPC, IAM, S3, RDS, ECR, Route 53, ALB/NLB, ASG, SSM, CloudWatch, Secrets Manager

Kubernetes & Containers: Kubernetes, Karpenter, Helm, Kustomize, HPA, RBAC, Network Policies, Ingress, Docker

laC & Delivery: Terraform, Packer, GitHub Actions, Jenkins, Argo CD, GitOps, CI/CD

Observability & Reliability: Prometheus, Grafana, Thanos, Alertmanager, CloudWatch, Incident Response, Root-Cause Analysis

Security & Networking: IRSA, IAM Least Privilege, Secrets Manager, Trivy, VPC, Security Groups, DNS, TLS

AI & Automation: Claude Code, MCP, AI Agents, Context Engineering, Python, Bash, Linux

CERTIFICATION

Certified Kubernetes Application Developer (CKAD) · The Linux Foundation / CNCF

Credential ID: LF-foco5c3jzm · credly.com/badges/6c6024f2-9ab8-4094-bf6f-02a3768f001b
